EASY, FREE WAYS TO CARE FOR YOUR LAWN.

Great landscaping creates a refuge and a peaceful retreat for the busy person. The first step to creating a refuge is a foundation of green, lush, thick, weed-free lawn. Rozelle Lawn & Landscape can help, but what if you could do it yourself? Here are **7 free methods** you can start implementing today to keep your yard healthy and green!

MOW HIGH (3-4 INCHES IS THE MAGIC RANGE!)

Whenever sunlight can reach the soil surface due to thin areas in your lawn, weed seeds have a chance to germinate. By mowing high, your grass will not only grow thicker, but it will also shade the ground so those pesky weeds don't stand a chance!

DO NOT BAG GRASS CLIPPINGS

Classic misconception. Simple and easy correction. By leaving your grass clippings behind when you mow, you are actually naturally fertilizing your lawn by putting the nutrients from your grass back where it came from.

MOW YOUR LAWN MORE OFTEN IN THE SPRING (TWO TIMES A WEEK WILL DO THE TRICK!)

By mowing an extra time each week during the spring months, you can prevent excess grass clumps from showing up. Make sure you mow less frequently during the summer and times of drought.

MOW OVER LEAVES & LEAVE THEM

Free fertilizer! Leaves are a nutrient-rich material that benefits the grass and microorganisms found in the soil. Mow over them and leave their nutrients for your lawn and soil!

WATER IN THE MORNING, NOT AT NIGHT

Watering at night creates a wet lawn that sounds mouthwatering to potential fungi and diseases. Water your lawn in the morning so the sun can naturally evaporate excess water and fend off nasty outbreaks.

WATER DEEPLY AND LESS FREQUENTLY

Simply put, frequently watering your lawn for shorter durations creates shallow roots. Try watering less frequently for longer periods of time so your grass has the deepest roots possible.

KEEP YOUR MOWER BLADES SHARP

Dull blades have the potential to tear the grass, which makes it difficult for the grass to heal and opens the plant up to disease and fungus outbreaks. Sharp mower blades ensure the grass is cut cleanly and allows the grass to heal quickly.

By creating a healthy lawn, you are one step closer to a stress-free weekend. Don't have time to do it yourself? Contact Rozelle today, and we'll work within your budget to create something beautiful so that you can sit back, relax, and enjoy!
